Index — Proceedings Books of the American Association of Equine Practitioners 1956-1991

The first professional (scientific) meeting of the American Association of Equine Practitioners was held at the LaSalle Hotel and Rolling Acres Equine Hospital, Chicago, Illinois in December, 1955.

Of the papers presented at that meeting, four were published in the June 15, 1956 issue of the *Journal of the American Veterinary Medical Association* (Vol. 128). These were:

Experimental Studies Relative to the Therapeutic Use of Ultrasound by J.F. Herrick, J.M. Janes and N.I. Ardan.

Nasal Irrigation in the Treatment of Nasal Catarrh and Sinus Infections in Horses by Paul J. Meginnis.

Surgical Removal of Fracture Fragments of the Proximal Sesamoid Bone by E.A. Churchill.

Local Anesthesia and Applied Anatomy as Related to Nerve Blocks in Horses by R. Getty, J.A. Sowa and R.J. Lundvall.

The first Proceedings Book covered the second Annual Meeting in 1956, the second book covered the third convention and so on to the 36th book, which covered the 37th professional meeting of the Association in December, 1991.

To facilitate the search for a particular title or author, only the year (minus the 19) and page number are given. For example, the entry, "Acceleration of open wound healing by cartilage" 65. 141 means that the title will be found on page 141 of the Proceedings Book covering the 1965 annual convention.

In the case of Practice Tips and Specialty Panels where it would, in some cases have been extremely difficult to associate a suitable title with the presentation by a particular author, no attempt has been made to break down the total presentation into its various "components." "Practice Tips" thus covers a multitude of titles and topics and a Specialty Panel such as "Race Track Practice" includes the Tying-Up Syndrome; Fractures at the Race Track; Firing, Past and Present, Female problems, etc.
